

Geometry Chapter 12 – Practice Test NAME \_\_\_\_\_

Find the number of vertices, faces and edges of the polyhedron.

1.

2.

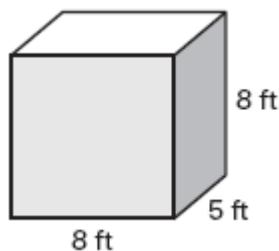

Use Euler's Theorem to find the value of  $n$ .

3. Faces: 8  
Vertices: 12  
Edges:  $n$

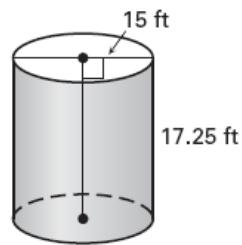

4. Faces:  $n$   
Vertices: 16  
Edges: 24

Find the surface area of the solid. Round decimals to two places.

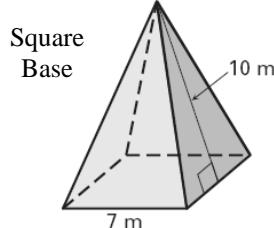

5.

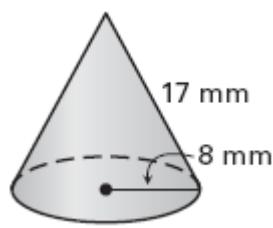

6.

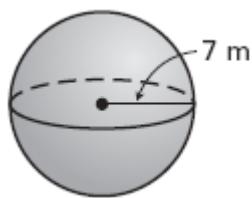

7.

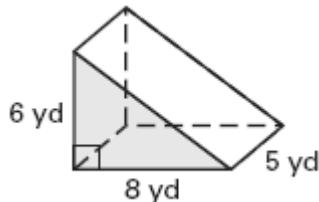

8.

9.

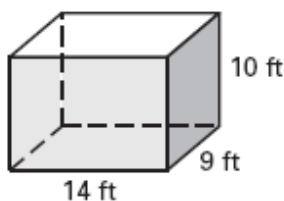

10.

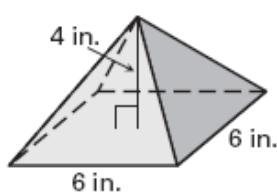

**Find the volume of the solid. Round decimals to two places.**

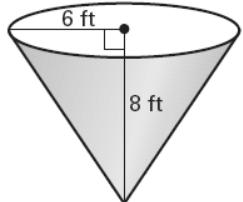

11.

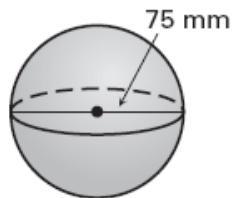

12.

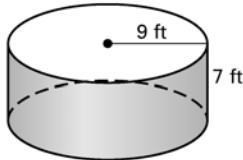

13.

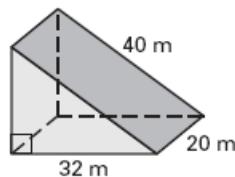

14.

15.

16.

### Answers

|   |  |
|---|--|
| 1. $V = 6$ , $F = 5$ , $E = 9$                                      | 2. $V = 7$ , $F = 7$ , $E = 12$  |
| 3. $V + F = E + 2$ so $n = 18$                                      | 4. $V + F = E + 2$ so $n = 10$   |
| 5. $S = 2B + Ph = 2(40) + 26(8) = 288$                              | 6. $S = 2\pi r^2 + 2\pi rh = 2\pi(7.5)^2 + 2\pi(7.5)(17.25) = 1166.32$ |
| 7. $S = B + \frac{Pl}{2} = 49 + \frac{(28)(10)}{2} = 189$           | 8. $S = \pi r^2 + \pi rl = \pi(8)^2 + \pi(8)(17) = 628.32$             |
| 9. $S = 4\pi r^2 = 4\pi(7)^2 = 615.75$                              | 10. $S = 2B + Ph = 2\left(\frac{6 \cdot 8}{2}\right) + 24(5) = 168^*$  |
| 11. $V = Bh = (14 \cdot 9) \cdot 10 = 1260$                         | 12. $V = \frac{Bh}{3} = \frac{(6 \cdot 6) \cdot 4}{3} = 48$            |
| 13. $V = \frac{\pi r^2 h}{3} = \frac{\pi(6)^2 \cdot 8}{3} = 301.59$ | 14. $V = \frac{4\pi r^3}{3} = \frac{4\pi(37.5)^3}{3} = 220,893.23$     |
| 15. $V = \pi r^2 h = \pi(9)^2 \cdot 7 = 1781.28$                    | 16. $V = Bh = \left(\frac{32 \cdot 24}{2}\right) \cdot 20 = 480^*$     |

\* Note that problems 10 and 16 require the use of the *Pythagorean Theorem* in order to find a measurement that is not given in the figure.
